

## How to work out what size you need

To work out what size InfoStrip you require, please refer to the steps below:

1. Measure the width of the opening of your Pigeon Holes or shelving unit.

We would recommend that you request the InfoStrip to be approximately 30 - 40mm less than the width of the opening.

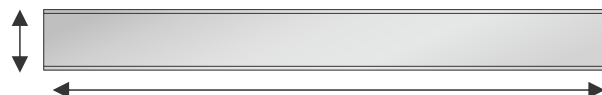

For example, if the opening is 200mm Wide (20cm) we suggest the width you request for InfoStrip is approx. 160mm - 180mm Wide (16cm-18cm) (Max).

This will allow for some space in between each InfoStrip as on above drawing. Leaving a space will enable you to access your labels at either end.

Please advise what width you would like for your InfoStrip.

2. Please also advise the quantity of InfoStrip you need.

- InfoStrip is 16mm High

- We will cut the InfoStrip to any width - to best suit your Pigeon Holes or Shelves.
